Table of contents

README

Prerequisites: Maven: 3.6.3 Java: 13 MySQL: 8.0.19

Instructions to follow during the execution of the program:

1. Open MySQL and execute the create-db.sql Make sure that the username and password are root and the connection is localhost:3306
2. run mvn clean
3. run mvn compile
4. run mvn datanucleus:schema-create
5. Execute the add-items.sql script in MySQL
6. run mvn exec:java
7. user: jorge pass:pass NOTE: For tests, run mvn test

To do the tests and check their functionality: mvn test

Public Attributes

- ContiPerfRule **i** = new ContiPerfRule()
-

Detailed Description

Class containing the tests of the client

Author

Diego Rojo

Jorge El Busto

Member Function Documentation

void BSPQ20_E2.Netflix.ClientTest.defLang ()

Method that makes sure that the default language of the app is English

static void BSPQ20_E2.Netflix.ClientTest.setUpValues () throws Exception [static]

Method that set up the values of the user and film

Member Data Documentation

ContiPerfRule BSPQ20_E2.Netflix.ClientTest.i = new ContiPerfRule()

The documentation for this class was generated from the following file:

- C:/Users/Jorge/Documents/GitHub/BSPQ20-E2/Netflix/src/test/java/BSPQ20_E2/Netflix/**ClientTest.java**

es.deusto.BSPQ20_E2.Netflix.server.db.DB Class Reference

Static Public Member Functions

- static Connection **connect** () throws Exception
- static User **logged** (String user, String pass)
- static ArrayList< Film > **retrieveFilms** ()
- static ArrayList< Film > **searchFilms** (String condition)
- static void **buyFilm** (Film f, User u)
- static Film **freeFilm** (User u)
- static String **getId** (User u)
- static int **getBoughtFilmsCount** (User u)
- static void **register** (String code, String name, String surname, String password, double salary)
- static ArrayList< Film > **myFilms** (User u)
- static void **openTrailer** (Film f) throws IOException

Detailed Description

Java integration with MySQL

Author

Jorge El Busto

Member Function Documentation

static void es.deusto.BSPQ20_E2.Netflix.server.db.DB.buyFilm (Film f, User u)[static]

Method to process the information in the **DB** so that the price of the bought film is taken away from the credit of the user who buys it.

Exceptions

<i>SQLException</i>	
---------------------	--

Parameters

<i>f</i>	Film whose price is going to be taken
<i>u</i>	User who is interested in buying the film

static Connection es.deusto.BSPQ20_E2.Netflix.server.db.DB.connect () throws Exception[static]

static Film es.deusto.BSPQ20_E2.Netflix.server.db.DB.freeFilm (User u)[static]

Method to process the information in the **DB** so that the price of the bought film is taken away from the credit of the user who buys it.

Exceptions

<i>SQLException</i>	
---------------------	--

Parameters

<i>f</i>	Film which is going to be given
<i>u</i>	User who will get the present

static int es.deusto.BSPQ20_E2.Netflix.server.db.DB.getBoughtFilmsCount (User u)[static]

Method to get the count of films bought by a certain user. It works along with the getID method.

Parameters

<i>u</i>	User from which we want to get the name
----------	---

static String es.deusto.BSPQ20_E2.Netflix.server.db.DB.getId (User u)[static]

Method to get the id of the user in MySQL to execute the transaction of buying a film and storing it in the user's particular bought films cart

Exceptions

<i>SQLException</i>	
---------------------	--

Parameters

<i>u</i>	User from which we want to get the name
----------	---

static User es.deusto.BSPQ20_E2.Netflix.server.db.DB.logged (String user, String pass)[static]

Method to check in the **DB** if the user credentials are valid

Exceptions

<i>SQLException</i>	
---------------------	--

Parameters

<i>con</i>	Connection with the DB
<i>user</i>	String with the username passed by the TextField
<i>pass</i>	String with the password passed by the JPasswordField

Returns

new user which will be running the program

static ArrayList<Film> es.deusto.BSPQ20_E2.Netflix.server.db.DB.myFilms (User u)[static]

Method to retrieve the films a certain user already owns.

Parameters

<i>con</i>	Connection to the DB
------------	-----------------------------

Returns

an array with the films a certain user owns

static void es.deusto.BSPQ20_E2.Netflix.server.db.DB.openTrailer (Film f) throws IOException [static]

Method to open the trailer of a film in the browser. It retrieves all the attributes of the film from the database, and working with the trailer getter, the URI is opened in a new browser if the platform in which the app is being executed supports browsing.

Parameters

<i>Film</i>	which is going to be opened
-------------	-----------------------------

Exceptions

<i>IOException, URISyntaxException, SQLException</i>	
--	--

static void es.deusto.BSPQ20_E2.Netflix.server.db.DB.register (String *code*, String *name*, String *surname*, String *password*, double *salary*)[static]

Method to register users into the SQL Database.

Parameters

<i>code</i>	Username
<i>name</i>	Name of the user
<i>surname</i>	Surname of the user
<i>password</i>	Password of the account
<i>salary</i>	Salary of the account

static ArrayList<Film> es.deusto.BSPQ20_E2.Netflix.server.db.DB.retrieveFilms ()[static]

Method to retrieve every single film in the **DB**

Exceptions

<i>SQLException</i>	
---------------------	--

Parameters

<i>con</i>	Connection to the DB
------------	-----------------------------

Returns

an array with every film in the FILM table

static ArrayList<Film> es.deusto.BSPQ20_E2.Netflix.server.db.DB.searchFilms (String *condition*)[static]

Method to search films regardless the attribute. It accepts the year, the director, the title... any of them

Exceptions

<i>SQLException</i>	
---------------------	--

Parameters

<i>con</i>	Connection to the DB
<i>condition</i>	String to be searched retrieved from the main window

Returns

Every film whose director, name, genre, year, title, or price contains the indicated string

The documentation for this class was generated from the following file:

- C:/Users/Jorge/Documents/GitHub/BSPQ20-E2/Netflix/src/main/java/es/deusto/BSPQ20_E2/Netflix/server/db/**DB.java**

BSPQ20_E2.Netflix.DBTest Class Reference

Public Member Functions

Static Public Member Functions

- static void **setUp** () throws Exception

Public Attributes

- ContiPerfRule **i** = new ContiPerfRule()

Detailed Description

Class containing the tests of the server

Author

Diego Rojo

Jorge El Busto

Member Function Documentation

void BSPQ20_E2.Netflix.DBTest.buyFilmTest ()

Method to check that films are correctly retrieved. We're trying it with the first film, Fast and Furious

void BSPQ20_E2.Netflix.DBTest.checkConnection () throws Exception

Method that tests the connect method

Parameters

<i>con</i>	connection created to check if the method works
------------	---

void BSPQ20_E2.Netflix.DBTest.checkCredentials ()

Method that tests the logged method to check if credentials are valid. The logged method is as deep as buying film method, so it takes a lot of time.

Parameters

<i>u</i>	user that correspond that credentials
----------	---------------------------------------

void BSPQ20_E2.Netflix.DBTest.checkFilmRetriever ()

Method that tests the retrieveFilms method that gets the films of the database.

Parameters

<i>filmsDatabase</i>	Arraylist of films created to check the method
----------------------	--

void BSPQ20_E2.Netflix.DBTest.checkFilmSearch ()

Method that tests the searchFilms method. The array shouldn't be null and it should contain films.

Parameters

<i>filmsSearched</i>	arrayList of films created to check if the method works
----------------------	---

void BSPQ20_E2.Netflix.DBTest.checkRegistration ()

Method that tests that the registration method works

void BSPQ20_E2.Netflix.DBTest.createDB ()

Method to check that DB is successfully created.

void BSPQ20_E2.Netflix.DBTest.doesBoughtFilmsCountIncrement ()

Method to check that the number of bought films by a user gets incremented after having bought one of them.

void BSPQ20_E2.Netflix.DBTest.doesFreeFilmWork ()

Method to check that, after buying a 3rd film, a free film is obtained method done manually here just to get coverage done because, in the windows, we include a JOptionPane.showMessageDialog, and it'd be tedious to have the messagedialog being popped up every single time the test is done

void BSPQ20_E2.Netflix.DBTest.doFilmsHavePrice ()

NOTE – There is no method to prove that opening trailer method works as the browser is opened Method that checks that all the films have a price set and there is no price missing

void BSPQ20_E2.Netflix.DBTest.getUserID ()

Method to check that the userID is retrieved from mySQL (to consider in operations in the transaction table)

void BSPQ20_E2.Netflix.DBTest.myFilmsNotNull ()

Method to check that, after buying a film, the ArrayList of bought films by a user is not null and contains at least a film. Buying films is the longest process here, so it should take around a tenth of a second.

void BSPQ20_E2.Netflix.DBTest.searchFilmsWOAttributes ()

Method that proofs that the searching bar works and searches films regardless the attributes and all the films searched by different conditions are properly retrieved

static void BSPQ20_E2.Netflix.DBTest.setUp () throws Exception [static]

Setting up the films, the user to test and the server

Exceptions

<i>Exception</i>	of many cases can be thrown: SQL, Network...
------------------	--

Member Data Documentation

ContiPerfRule BSPQ20_E2.Netflix.DBTest.i = new ContiPerfRule()

Constructor & Destructor Documentation

es.deusto.BSPQ20_E2.Netflix.pojo.Film.Film () [protected]

es.deusto.BSPQ20_E2.Netflix.pojo.Film.Film (String *id*, String *title*, String *genre*, String *director*, int *year*, float *price*, String *url*, String *trailer*)

Constructor of the film which is going to be used in the project

Parameters

<i>id</i>	of the film registered in the DB
<i>title</i>	of the film
<i>genre</i>	of the film
<i>director</i>	of the film
<i>year</i>	the film was released
<i>price</i>	of the film
<i>url</i>	of the film cover to be displayed on the GUI

<i>trailer</i>	of the film to be opened when clicking "Watch trailer" in the GUI
----------------	---

Member Function Documentation

es.deusto.BSPQ20_E2.Netflix.server.Main Class Reference

Static Public Member Functions

- static `HttpServer startServer ()`
- static void `main (String[] args)` throws `IOException`

Static Public Attributes

- static final String `BASE_URI` = "http://localhost:10072/myapp/"

Detailed Description

Main class.

Author

Annette

Member Function Documentation

static void es.deusto.BSPQ20_E2.Netflix.server.Main.main (String[] args) throws IOException [static]

Main method.

Parameters

<i>args</i>	
-------------	--

Exceptions

<i>IOException</i>	
--------------------	--

static HttpServer es.deusto.BSPQ20_E2.Netflix.server.Main.startServer () [static]

Starts Grizzly HTTP server exposing JAX-RS resources defined in this application.

Returns

Grizzly HTTP server.

Member Data Documentation

final String es.deusto.BSPQ20_E2.Netflix.server.Main.BASE_URI = "http://localhost:10072/myapp/" [static]

The documentation for this class was generated from the following file:

- C:/Users/Jorge/Documents/GitHub/BSPQ20-E2/Netflix/src/main/java/es/deusto/BSPQ20_E2/Netflix/server/**Main.java**

MainWindow Category Reference

Detailed Description

The constructor of the main window needs a user to operate, in order to retrieve films from a user or buy films after having logged in as that user

Parameters

<i>u</i>	User which is going to be navigating through the window and whose information will be used at some stages such as checking already owned films or buying another film.
----------	--

The documentation for this category was generated from the following file:

es.deusto.BSPQ20_E2.Netflix.server.MyResource Class Reference

Public Member Functions

- String `getIt ()`
-

Detailed Description

Root resource (exposed at "myresource" path)

Author

Inigo Orue

Member Function Documentation

String `es.deusto.BSPQ20_E2.Netflix.server.MyResource.getIt ()`

Method handling HTTP GET requests. The returned object will be sent to the client as "text/plain" media type.

Returns

String that will be returned as a text/plain response.

The documentation for this class was generated from the following file:

- C:/Users/Jorge/Documents/GitHub/BSPQ20-E2/Netflix/src/main/java/es/deusto/BSPQ20_E2/Netflix/server/**MyResource.java**

Detailed Description

Class containing the tests of the classes of Film and User

Author

Diego Rojo
Jorge El Busto

Member Function Documentation

void BSPQ20_E2.Netflix.PojoTest.checkFilmDirector ()

Method to check the setDirector and getDirector methods

void BSPQ20_E2.Netflix.PojoTest.checkFilmGenre ()

Method to check the setGenre and getGenre methods

void BSPQ20_E2.Netflix.PojoTest.checkFilmId ()

Method to check the setId and getId methods

void BSPQ20_E2.Netflix.PojoTest.checkFilmPrice ()

Method to check the setPrice and getPrice methods

void BSPQ20_E2.Netflix.PojoTest.checkFilmTitle ()

Method to check the setTitle and getTitle methods

void BSPQ20_E2.Netflix.PojoTest.checkFilmURL ()

Method to check the setURL and getURL methods

void BSPQ20_E2.Netflix.PojoTest.checkFilmYear ()

Method to check the setYear and getYear methods

void BSPQ20_E2.Netflix.PojoTest.checkTrailer ()

Method to check the setTrailer and getTrailer methods

void BSPQ20_E2.Netflix.PojoTest.checkUserCode ()

Method to check the setCode and getCode methods

void BSPQ20_E2.Netflix.PojoTest.checkUserName ()

Method to check the setName and getName methods

void BSPQ20_E2.Netflix.PojoTest.checkUserPassword ()

Method to check the setPassword and getPassword methods

void BSPQ20_E2.Netflix.PojoTest.checkUserSalary ()

Method to check the setSalary and getSalary methods

void BSPQ20_E2.Netflix.PojoTest.checkUserSurname ()

Method to check the setSurname and getSurname methods

void BSPQ20_E2.Netflix.PojoTest.settersTrans ()

Method to check that setters work well in transactions

static void BSPQ20_E2.Netflix.PojoTest.setUp () [static]

Method to put the values of the film and user to null to test getters and setters afterwards

void BSPQ20_E2.Netflix.PojoTest.toStringTest ()

Method to proof that toString methods for user already work

void BSPQ20_E2.Netflix.PojoTest.transactions ()

Method to check that transactions constructor works well

Member Data Documentation

ContiPerfRule BSPQ20_E2.Netflix.PojoTest.i = new ContiPerfRule()

The documentation for this class was generated from the following file:

- C:/Users/Jorge/Documents/GitHub/BSPQ20-E2/Netflix/src/test/java/BSPQ20_E2/Netflix/**PojoTest.java**

es.deusto.BSPQ20_E2.Netflix.client.gui.RegWindow Class Reference

Inheritance diagram for es.deusto.BSPQ20_E2.Netflix.client.gui.RegWindow:

Public Member Functions

- `RegWindow ()`

Constructor & Destructor Documentation

es.deusto.BSPQ20_E2.Netflix.client.gui.RegWindow.RegWindow ()

Action listener to retrieve the data from several text fields and to pass them into the DB user registering method.

The documentation for this class was generated from the following file:

- `C:/Users/Jorge/Documents/GitHub/BSPQ20-E2/Netflix/src/main/java/es/deusto/BSPQ20_E2/Netflix/client/gui/RegWindow.java`

es.deusto.BSPQ20_E2.Netflix.pojo.Transaction Class Reference

Public Member Functions

- **Transaction** (Film *f*, User *u*)
- **Film** getF ()
- void setF (**Film** *f*)
- **User** getU ()
- void setU (**User** *u*)

Protected Attributes

- **Film** *f*
- **User** *u*

Detailed Description

Transaction class to store bought films

Author

Annette

Constructor & Destructor Documentation

es.deusto.BSPQ20_E2.Netflix.pojo.Transaction.Transaction (Film *f*, User *u*)

Constructor of the transaction class

Parameters

<i>f</i>	Film which is being bought
<i>u</i>	User who bought the film <i>f</i>

Member Function Documentation

Film es.deusto.BSPQ20_E2.Netflix.pojo.Transaction.getF ()

User es.deusto.BSPQ20_E2.Netflix.pojo.Transaction.getU ()

void es.deusto.BSPQ20_E2.Netflix.pojo.Transaction.setF (**Film** *f*)

void es.deusto.BSPQ20_E2.Netflix.pojo.Transaction.setU (**User** *u*)

Member Data Documentation

Film es.deusto.BSPQ20_E2.Netflix.pojo.Transaction.f [protected]

User es.deusto.BSPQ20_E2.Netflix.pojo.Transaction.u [protected]

The documentation for this class was generated from the following file:

- C:/Users/Jorge/Documents/GitHub/BSPQ20-E2/Netflix/src/main/java/es/deusto/BSPQ20_E2/Netflix/pojo/**Transaction.java**

es.deusto.BSPQ20_E2.Netflix.pojo.User Class Reference

Public Member Functions

- **User** (String **code**, String **name**, String **surname**, String **password**, double **salary**)
- void **setCode** (String **code**)
- String **getCode** ()
- void **setName** (String **name**)
- String **getName** ()
- String **getSurname** ()
- void **setSurname** (String **surname**)
- String **getPassword** ()
- void **setPassword** (String **password**)
- double **getSalary** ()
- void **setSalary** (double **salary**)
- String **toString** ()

Protected Attributes

- String **code** = null
- String **name** = null
- String **surname** = null
- String **password** = null
- double **salary** = 0

Constructor & Destructor Documentation

es.deusto.BSPQ20_E2.Netflix.pojo.User.User (String **code**, String **name**, String **surname**, String **password**, double **salary**)

Constructor of the user class

Parameters

<i>code</i>	Username to be used in logging in processes
<i>name</i>	Name to be displayed in the main window
<i>surname</i>	Surname to be stored in the DB
<i>password</i>	Password of the user used in order to log in
<i>salary</i>	Salary to be used when buying films

Member Function Documentation

String es.deusto.BSPQ20_E2.Netflix.pojo.User.getCode ()

String es.deusto.BSPQ20_E2.Netflix.pojo.User.getName ()

String es.deusto.BSPQ20_E2.Netflix.pojo.User.getPassword ()

double es.deusto.BSPQ20_E2.Netflix.pojo.User.getSalary ()

String es.deusto.BSPQ20_E2.Netflix.pojo.User.getSurname ()

void es.deusto.BSPQ20_E2.Netflix.pojo.User.setCode (String *code*)

void es.deusto.BSPQ20_E2.Netflix.pojo.User.setName (String *name*)

void es.deusto.BSPQ20_E2.Netflix.pojo.User.setPassword (String *password*)

void es.deusto.BSPQ20_E2.Netflix.pojo.User.setSalary (double *salary*)

void es.deusto.BSPQ20_E2.Netflix.pojo.User.setSurname (String *surname*)

String es.deusto.BSPQ20_E2.Netflix.pojo.User.toString ()

Method for the user to be printed in loggers

Returns

string to be displayed in loggers

Member Data Documentation

String es.deusto.BSPQ20_E2.Netflix.pojo.User.code = null [protected]

String es.deusto.BSPQ20_E2.Netflix.pojo.User.name = null [protected]
